

A portion of the proceeds from this book will help fund Pallas Cat education and conservation efforts.

Pallas Cat **Conservation in Action**

SAVING PALLAS CATS AND THEIR HABITATS

Steppe Wildlife Conservation & Research Center is dedicated to protecting wildlife in Mongolia's steppe zone. The steppe zone is treeless and prone to droughts, soil erosion, and desertification. Steppe Wildlife plants trees to protect this area. The trees also provide shelter, food, and resting locations for wildlife.

EDUCATION

Steppe Wildlife works in the local community to increase awareness and change behavior by making conservation personal. They visit local schools and give live presentations. They also offer students the chance to go out into the field to search for and track Pallas Cats.

COLLABORATION

Dr. Jim Sanderson, founder and director of The Small Wild Cat Conservation Foundation (SWCCF), and Buyandelger Suuri and Otgonbayar Baatargal of Steppe Wildlife Conservation & Research Center, work together to help Pallas Cats in Mongolia.

Conservationists work together with partners and organizations around the world to identify and reduce threats to small wild cats.
